Arman Khehra

CS Student & Developer

Berlin, Germany | armaan.txt@gmail.com | +49 173 205 8388 | github.com/arivorp
Portfolio: https://arivorp.github.io

PROFILE

First-year Computer Science student with hands-on experience building and deploying production software. I have designed and self-hosted four Discord bots serving active communities, built my own interpreted programming language in Python, and manage a Linux VPS with automated deployments. I bring strong problem-solving skills, a self-taught engineering mindset, and practical hardware experience from building custom PCs. Looking for IT roles in Berlin where I can contribute and grow.

EDUCATION

B.Sc. Computer Science 2025 - present
SRH Berlin University of Applied Sciences
First year | English-taught programme

PROJECTS

blvck0ut — Discord Community Bot

github.com/arivorp/blvck0ut Node.js, discord.js 14, SQLite, Canvas, yt-dlp

- Built a 100+ command Discord bot with a souls economy, creature-collecting RPG, music streaming, custom canvas-rendered leveling cards, and full moderation suite.
- Self-hosted on a Hetzner VPS with PM2 process management and rsync-based deployments.
- Designed an animated theme engine that resolves server emojis by name at runtime.

Vellum — Interpreted Programming Language

github.com/arivorp/Vellum Python (lexer, parser, tree-walking interpreter)

- Designed and implemented a complete interpreted language with variables, conditionals, loops, functions, strings, lists, and a REPL.
- Built a custom lexer and recursive-descent parser with detailed error messages showing file, line, and column.

Production Bot Suite (4 bots)

github.com/arivorp/bot-portfolio Node.js, Python, Express, Groq API, Edge TTS, Pollinations AI

- Built and host four Discord bots: community management with staff performance tracking, server setup automation, an AI companion with voice chat (STT + TTS), and a utility microservice.
- All four run on a single VPS, managed through PM2 with zero-downtime deploys.

Flashcards — Terminal Revision App

github.com/arivorp/flashcards Python, JSON

- Built a CLI flashcard app with quiz mode, scoring, difficult-cards-first sorting, and JSON persistence. University class project.

TECHNICAL SKILLS

Languages: JavaScript (Node.js), Python, SQL, HTML/CSS
Frameworks: discord.js 14, discord.py 2.3, Express.js
Databases & Tools: SQLite, Git/GitHub, PM2, rsync, ffmpeg
AI & APIs: Groq API (LLM + Whisper STT), Edge TTS, Pollinations AI
Infrastructure: Linux server admin (Ubuntu), SSH, VPS hosting, CI/CD deploys
Hardware: PC building & troubleshooting, component selection

CERTIFICATES

Certified Game Developer 2021
WhiteHat Jr

Certified Mobile App Developer 2021
WhiteHat Jr / BYJU'S FutureSchool

Mission Mars Hackathon — Participation 2021
WhiteHat Jr / CreatorSpace

LANGUAGES

English (native) | German (learning) | Punjabi (native)

INTERESTS

PC building, open-source development, Discord community management, language design, server infrastructure
